Summary

National (as of 14/03/2020, 3 pm)

- Since 09.03.2020, **8** deaths have been reported in Germany in connection with COVID-19 diseases.
- Since 08.03.2020, 2 German tourists died of COVID-19 in Egypt.
- All 16 federal states are affected. Extensive contact tracing by the responsible health authorities is ongoing.
- Most federal states have announced school and daycare closures starting from the week of 22/03/2020.

Epidemiological Situation in Germany

Case numbers¹

With over 3,000 cases in Germany, the COVID-19 case numbers can no longer be manually updated and reported in a quality assured manner. Therefore, epidemiological evaluations in the COVID-19 situation report are based only on the electronically transmitted data available to the Robert Koch Institute (RKI) at the time of the data closure. The number of cases notified in advance manually will be listed in addition to the electronically reported cases until 16/03/2020 (see Table 1), after which only the electronically transmitted cases will be shown.

A total of 3,795 (+733) laboratory-confirmed cases of coronavirus disease 2019 (COVID-19) have been detected in Germany since 27/01/2020, of which 3,421 were electronically reported to and validated at the RKI. So far, 8 deaths related to COVID-19 diseases were reported.

Information on laboratory-confirmed cases

So far, 3,421 cases in 16 federal states have been laboratory-confirmed (Table 1).

Table 1: Distribution of the laboratory-confirmed COVID-19-cases per federal state in Germany (14/03/2020)

Federal State	Number of manually reported cases	Electronically submitted cases	
		Number	cases/100.000 pop.
Baden-Württemberg	569	506	5
Bavaria	681	605	5
Berlin	216	216	6
Brandenburg	61	57	2
Bremen	50	50	7
Hamburg	158	119	6
Hesse	203	141	2
Mecklenburg-Western Pomerania	45	23	1
Lower Saxony	253	187	2
North Rhine-Westphalia	1,154	1,154	6
Rhineland-Palatinate	121	121	3
Saarland	40	31	3
Saxony	93	86	2
Saxony-Anhalt	45	40	2
Schleswig-Holstein	60	54	2
Thuringia	46	31	1
Total	3,795	3,421	4

In addition, diagnosis is ongoing for suspected cases in several federal states. Current figures on confirmed cases are available on the RKI website at

https://www.rki.de/DE/Content/InfAZ/N/Neuartiges_Coronavirus/Fallzahlen.html

¹ Due to subsequent reporting, information/numbers may change in the following weeks.

Information on electronically reported cases

Of the 3,795 laboratory-confirmed cases, so far 3,421 cases from 16 states have been electronically reported to the Robert Koch Institute (see fig. 1).

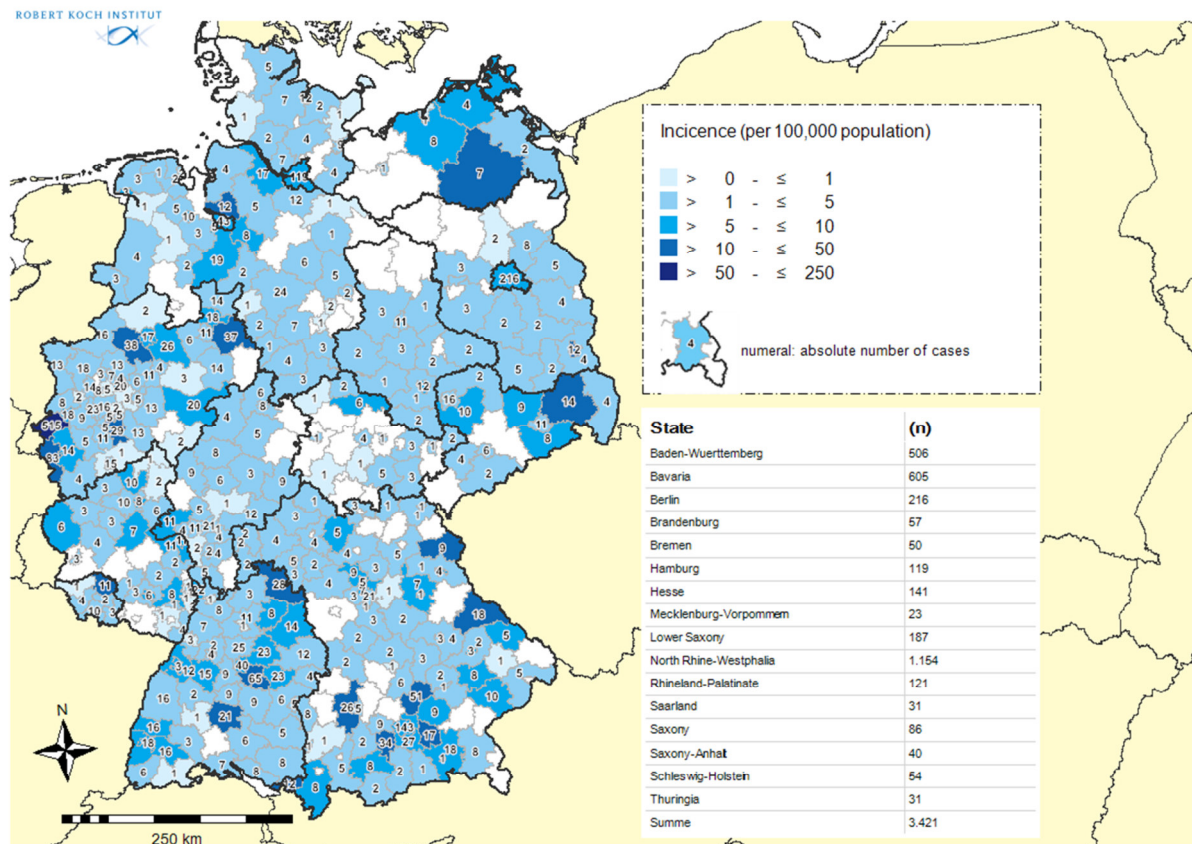

Figure 1: Distribution of the 3,421 electronically reported COVID-19-cases in Germany by county and state (14/03/2020)

Among these cases, 1,936 are male (57%) and 1,476 female (43%). The age range is from 0 to 95 years, including 31 children under the age of 5, 88 children aged 5-14 and 2,706 persons in the age groups 15 to 59 years and 525 persons 60 years and older (see Figure 2). The age of 10 notified cases is unknown. The median age is 46 years.

Figure 2: Electronically reported COVID-19-cases in Germany by age group and sex (n=3,394 with data available, 14/03/2020)

Known dates of symptom onset ranged from 23/01/2020 through 13/03/2020. In 1,360 cases, onset of symptoms is unknown and therefore date of reporting is shown (see fig. 3).

Figure 3: Epidemiological curve of the 3,417 electronically reported COVID-19-cases in Germany, by onset of symptoms and alternatively by date of reporting; in 4 cases neither date was available (14/03/2020)

Further information

The 8 COVID-19-related deaths reported in Germany since 09/03/2020 concerned 5 men and 3 women, all older than 65 years of age, from 3 states (Northrhine-Westfalia (5) Baden-Wurttemberg (3) and Bavaria (1).

In addition, 2 German tourists died of COVID-19 in Egypt on 08/03/2020 and 11/03/2020.

Assessment by the RKI

At the global and the national level, the situation is very dynamic and must be taken seriously. Severe and fatal courses occur in some cases. The number of cases in Germany continues to increase. The RKI currently assesses the overall risk to the health of the German population as moderate. However, this risk varies from region to region and is high in "particularly affected areas". The probability of serious disease progression increases with increasing age and existing previous illnesses. The burden on the health care system depends on the regional distribution of cases, health care capacity and initiation of containment measures (isolation, quarantine, social distancing etc.), and may be very high in some regions. This assessment may change on short notice as a result of new findings.

Measures taken by Germany

Risk areas and particularly affected areas in Germany

- As of 12/03/2020, the following regions are classified as particularly affected areas in Germany:
 - o District of Heinsberg (North Rhine Westphalia)
- All federal states are implementing measures to enforce social distancing, such as cancellation of mass gatherings, closure of cultural institutions such as museums, theaters, concert halls, limiting operation of restaurants, bars and clubs, as well as school and daycare closures starting the week of 22/03/2020.
- As of 12/03/2020, the following regions are classified as risk areas (www.rki.de/covid-19-risikogebiete):
 - o In Austria: Tyrol
 - o In China: Hubei province (incl. City of Wuhan)
 - o Iran
 - o Italy
 - o In South Korea: The province of Gyeongsangbuk-do (North-Gyeongsang)
 - o In Spain: Madrid
 - o In France: Region Grand Est (this region includes Alsace, Lorraine and Champagne-Ardenne)
